Hello Bill,

I appreciate receiving your informative email and will be available for your upcoming meeting in June. I must advise you that Councilwoman Flemister is not representing the City of Bremerton this term and the Councilman is Roy Runyon. He will informed of this meeting and I will ask that he attend.

The most impressive outcome of all the testing is setting goals for a clean-up plan and working together to define the scope of all stakeholders in the investigation. You will have my utmost corporation during this next phase.

Respectfully,

Patty Lent, Mayor
City of Bremerton

Subject: Bremerton Gasworks Superfund Site

Greetings Mayor Lent and Councilwoman Flemister -

It has been a while since I have communicated with you about the site and activities related to it. I'm writing to

- 1) provide you with a brief update of activities as the site and
- 2) notify you of an upcoming meeting that we hope you will be able to attend.

In the last year, Cascade Natural Gas (Cascade) has conducted additional sampling of beach sediments at the site and performed a second time-critical removal action on a portion of the beach (a removal action had been previously performed on the beach in 2010). With the completion of the removal action, EPA has been working with Cascade and its contractors to develop materials that will be used in determining the scope of the remedial investigation and feasibility study that will be conducted at the site. The remedial investigation will be conducted to determine the nature and extent of contamination at the site and to determine the risks associated with the contamination to human health and the environment. The feasibility study will identify and evaluate a range of cleanup options for the site. This work will ultimately support EPA's cleanup decision for the site.

As part of our effort to determine the scope of the upcoming site investigation, we are currently planning on holding a meeting with key stakeholders, including the City of Bremerton. The primary objectives of the meeting will be to:

- 1) Provide attendees with a brief overview of the Superfund process and where current site-related activities fall within the process;
- 2) Provide attendees with background information about the site;
- 3) Present information developed to date related to the scope of the investigation; and
- 4) Possibly conduct a brief site visit.

The broader objectives of the meeting will be to provide you/your organization with sufficient information for you to begin to formulate your role/level of participation in the investigation and also to solicit your input in defining the scope of the investigation.

Currently, we are targeting the meeting for MID-TO-LATE JUNE in BREMERTON. You will be contacted in the near future by one of Cascade's contractors regarding potential dates, your interest and availability to attend, and meeting location.

I hope you will be able to join us when we meet. In the interim, please don't hesitate to contact me with any questions or comments about site-related activities you may have.

Bill Ryan
